

Assignment 14

11 February 2023 12:34 PM

Ques 1)

What is position property in CSS and its types ?

Answer

CSS position

The **position** property specifies the type of positioning method used for an element (static, relative, fixed, absolute or sticky).

Ques 2)

How many types are positioning are there in CSS?

In CSS five types of positioning.

- 1) Static
- 2) Fixed
- 3) Absolute
- 4) Relative
- 5) Sticky

Ques 3)

What is Z-index and why use it ?

Answer

Z Index (z-index) is a CSS property that defines the order of overlapping HTML elements. Elements with a higher index will be placed on top of elements with a lower index.

Use Z Index if you need to put a background element below a container. You can easily place the background under every element by giving it a negative Z Index like below:
