Answer:

Internet is very popular in this Time. It connect millions of computers ,webpages ,web sites and servers. In this time many people helps internet sends photos, videos, setups, emails,etc
It creates a communication medium to share and get information online. If your device is connected to the Internet then only you will be able to access all the applications, websites, social media apps, and many more services. Internet nowadays is considered as the fastest medium for sending and receiving information.

Que 2)

What is Web Browser ?

Answer:

A web Browser is a simple browser to access new websites. And if developer person is very helpful like if inspect the elements to know the error and check the height, width,padding,margin,and dom manipulation. Inside the web browser console ,network, sources,memory,performance,security. In these terms helps to developer to build great websites and saves lots of time to find error.

Ques 3)

What is Browser Engine ?

Answer:

Ques 4)

What is static website ?

Answer:

Static websites means does not changes this is fixed site and the great advantage of static websites Saves money and if build simple landing page ,login page, use always static website.

Advantage:

Flexibility

Scalability

Ques 5)

What is Dynamic Website ?

Answer:

Dynamic Websites presents different information to different visitors. Example:

Hotstar,social media apps,bookmyshow,etc.

Dynamic website m server hota hai and database hota hai etc

In dynamic website technology use node js ,mysql, php ,python, etc.

Disadvantage:

hey require much more time, effort, and know-how to create from scratch. If you don't have the technical expertise to build and maintain a dynamic website, you can invest in a developer or development team.

Thank you
